## ***FILIP VAN DINGENEN - SUSKEWIET VISIONS***

November 18, 2023 - January 20, 2024

**opening Saturday November 18, 5-8pm**

'Can a folkloristic tradition be re-contextualised and reveal a potential collective intelligence to harmonise our dominant relation towards non-human entities?'

'The "Suskewiet Visions" concept is based on a traditional sport in the southwest of Flanders. The traditional sport consists of counting the songs of birds on a specific stick and subdivided by arithmetic partitions. David Shongo and Filip Van Dingenen copied the methodologies of traditional sport and re-contextualised the stick as a potential tool for observing our environment and a means of interconnecting different spaces and different biodiversity in the world. The concept of "Suskewiet Visions" sets an inclusive framework for global ecological responsibility, and brings an algorithmic and artificial intelligence dimension based on data collected from several corners of the world. The Suskewiet visions project is therefore intended to be an alternative cartography of the visualisation of the global ecosystem and a means of building together new relationships between man and nature from the culture of listening to the environment.'

at Waldburger Wouters, Brussels
